# Assignment #1

Test Drive the Workspace

This first exercise will help you get familiar with a workspace. Get in and get comfortable with the tools.

Go to your "My Account" page, and find "workspace" in the "My Tools" module. Click on the arrow button to launch the workspace.

> **NOTE:** Some hubs allow workspace access only for trusted users and tool developers. If you get an "access denied" message when launching the workspace, file a support ticket to request access. If you're in the "trusted" category, hub administrators will enable your account.

Once the workspace comes up, try the following tasks:

- Find the "start" menu in the lower-left corner. See what's on the menu, and try launching a few different programs:
    - Find "Calculator" under "Utilities" and launch that
    - Find either "gedit" or "geany" and launch that

- Launch an additional xterm window
- Right-click on the xterm to change the font size

- Try uploading a file from your desktop into the workspace:

    ```
    importfile
    ```

- Try downloading a file from the workspace to your desktop:

    ```
    exportfile foo.jpg
    ```
    or
    ```
    exportfile document.pdf
    ```

- Close your web browser, open a new window, and log back into the hub. Find your workspace on the "My Account" page under "My Sessions." Open that session. Everything should be just the way you left it.
